

# Planting Instructions

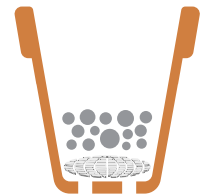

**1.**

Cover the holes with mesh, to make sure the soil cannot clog the holes.

**2.**

Make sure that planters without feet not directly make contact with the subsurface. Loose feet prevent this.

**3.**

Fill the 1/3 of planter with Lightweight Expanded Clay Aggregate. It allows excessive water to flow away through the holes.

**4.**

Then fill the planter with 2/3 of potting soil and place the plant in the planter.

**5.**

After filling the planter, we recommend not to replace the planter. The weight of clay aggregate and the potting soil could cause damage to the planter.
